Environmental Policy

The General Management has established the following environmental policy, keeping its commitment to IRAM's mission, sharing its vision and embracing IRAM's values:

- Carry out the internal activities of the organization assuming its commitment to protecting the environment, preventing pollution, making a rational use of resources and managing waste correctly.
- Establish environmental objectives in line with our activities, while contemplating the continuous improvement of the environmental management system and, therefore, of its execution.
- Promote environmental awareness and education, encouraging our future generations to develop a culture and lifestyle favoring the sustainable development of society.
- Put into practice initiatives aimed at increasing the degree of environmental awareness of the personnel and of all those suppliers and/or contractors who, as a result of their activities, may cause impacts on the environment.
- Have the necessary space and resources for the development of standards, driven by the interested parties, which contribute to the sustainability of the country.
- Comply with the relevant environmental legal requirements and any other environmental statement to which IRAM voluntarily subscribes.
